

SQL Notes: 05/21/2026

Math functions:

For Math functions you can use built in functions or create a custom code.

Rand:

SELECT RAND();

FLOOR:

Returns the largest integer less than or equal to a number.

POWER: Raises a number to a power.

POWER(base, exponent)

MOD: Returns the remainder after division.

MOD(a, b)

CEIL() / CEILING(): Returns the smallest integer greater than or equal to a number.

ROUND(): Rounds a number to a specified number of decimal places.

ROUND(number, decimals)

DATEDIFF():

Returns the difference between two dates

DATEDIFF(date1, date2)

DATETIME: Used to store both date and time.

DAYOFWEEK(): Returns the weekday number.

MONTH(): Returns the month number.

MONTHNAME(): Returns the month name.

YEARWEEK(): Returns year and week number together.

NOW(): Returns current date and time.

```
SELECT NOW();
```

CURDATE(): Returns current date only.

```
SELECT CURDATE();
```

SUB-QUERIES:

A subquery is a query written inside another query. Execution in sub query is at query level.

Derived Tables: A derived table is a subquery used in the FROM clause. It acts like a temporary table.

Correlated Subqueries: A correlated subquery depends on the outer query. It executes once for each row of the outer query.

Subquery in SELECT: A subquery can also appear inside the SELECT list.

Bridge Table: A bridge table (junction table) is used to handle a many-to-many relationship.
